

Environmental Policy Statement

ENVIRONMENTAL POLICY

At Zircom Data Communications Ltd, we consider a “cradle to grave” view on the effect of our processes on the environment, whilst striving to prevent emissions of harmful materials and restrict generation of waste to the lowest feasible levels. We follow the recommended BATNEEC philosophy – Best Available Technology Not Entailing Excessive Cost.

ENVIRONMENTAL OBJECTIVES

Our Environmental Policy will be achieved by:

- Respecting the physical and social environments in which we operate
- Ensuring that our products, processes and operations meet current environmental criteria
- Efficient use of materials and natural resources
- Regular monitoring of appropriate environmental indicators
- Recycling of waste wherever possible
- Disposing of waste in a responsible manner in compliance with the Duty of Care
- Promoting commitment to environmental responsibility of all employees

We will work with our customers and suppliers to continually minimise the effects of our operations, products and processes on the environment.

Where we have a responsibility for disposing of material it will then be taken from our customer and will be disposed of by methods which meet our environmental policies, and the requirements of the Environmental Protection Act.

ENVIRONMENTAL RESPONSIBILITY

The responsibility for the Environmental programme within Zircom is vested in the Quality Manager.
